

Download Coastal Towns In Transition Local Perceptions Of Landscape Change

Highlights Examines transition as a geographical process, reconfiguring patterns and scales of activity. Provides concepts for assessing geographical implications of transition to a low-carbon economy. Outlines location, landscape, territoriality, uneven development, scaling, and embeddedness. Coasts are among the most complex, vulnerable and sensitive of all natural ecosystems, and their management presents various problems and difficulties especially in our era of climate change in which coastal cities and populations face a range of serious threats (including rising sea levels). The Journal of Environmental Management is a journal for the publication of peer reviewed, original research for all aspects of management and the managed use of the environment, both natural and man-made. Critical review articles are also welcome; submission of these is strongly encouraged. As governments and the general public become more keenly aware of the critical issues arising from how ... JSTOR is a digital library of academic journals, books, and primary sources.
